DETAILED ACTION

1. Claims 1-15 are presented for examination.
2. Applicant is required to update the status of all co-pending applications indicated in the instant application.

Specification

3. A substitute specification including the claims is required pursuant to 37 CFR 1.125(a) because of missing words caused by punched holes.

A substitute specification filed under 37 CFR 1.125(a) must only contain subject matter from the original specification and any previously entered amendment under 37 CFR 1.121. If the substitute specification contains additional subject matter not of record, the substitute specification must be filed under 37 CFR 1.125(b) and must be accompanied by: 1) a statement that the substitute specification contains no new matter; and 2) a marked-up copy showing the amendments to be made via the substitute specification relative to the specification at the time the substitute specification is filed.

Drawings

4. The drawings are objected to because the description of the drawing should not be in the figure. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Double Patenting

5. Claims 1-6 provisionally rejected under the judicially created doctrine of double patenting over claims 1, 2 and 4-7 of copending Application No. 09/663,252. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that copending application since the referenced copending application and the instant application are claiming common subject matter, as follows: both applications claim a method for allocating resources comprising the steps of displaying a list of resources; selecting the resources and configuring the selected resources. The subject application does not recite the processing resources as set forth in the copending application. It would have been obvious to one of ordinary skill in the art to recognize that processing resources are one of a plurality of types of resources.

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Claim Rejections - 35 USC § 112

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2185

7. Claims 1-6 and 8-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

8. Claim 1 recites the limitation "the selected resources" in line 7. There is insufficient antecedent basis for this limitation in the claim.

9. Claim 8 recites the phrase "the method" in line 1. There is insufficient antecedent basis for this phrase in the claim.

10. Claim 6 is objected to because of the following informalities: claim 6 depends on claim 6 (a claim cannot depend on itself). For further examination, the examiner assumes claim 6 depends on claim 4. Appropriate correction is required.

Claim Rejections - 35 USC § 102

11. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the

Art Unit: 2185

reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

12. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Young, U.S. Patent No. 6,560,606.

13. Regarding claim 1, Young teaches a method for allocating processing resources comprising the steps of:

displaying a list of resources on the display device [col. 10, lines 1-3, 16-19];

accepting signals from the user input device to indicate the configuration of at least a portion of the resources [The operator configures the pipeline by selecting the needed resources (col. 10, lines 15-19). Therefore, inherently, the operator uses input device to input his/her selection]; and

configuring the selected resources [col. 10, line 16].

Claim Rejections - 35 USC § 103

14. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

15. Claims 2-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Young, U.S. Patent No. 6,560,606.

16. Regarding claims 2-6, these claims are directed to method steps for creating a computing environment of claim 1. As stated above, Young teaches the invention substantially as set forth

Art Unit: 2185

in claim 1. At the time of the invention, one of ordinary skill in the art would have readily recognized that Young may obviously also teach the method steps of claim 1 as set forth in claims 2-6. As such, claims 2-6 are rejected under the same rationale with respect to claim 1.

17. Regarding claims 7-15, Young teaches the claimed method steps. Therefore, Young teaches the apparatus to implement the claimed method steps.
